

## Find a class

### Course type

Class with hands-on practice

### Duration

3 Hours

### Product

Windchill 13.0.2

### Delivery method

Instructor-led

Self-guided

### Guidebook languages

English

### Course overview

Configure change as an orderly process for product development. Create rules to manage the relationships between change objects. Create a simplified release procedure using promotion requests. You will also perform a change on multiple objects simultaneously.

### Prerequisites

Windchill: Automate Change Processes

### Audience

Business Administrator

### Learning objectives

Describe the change management implementation strategy

Identify and create change management objects

Construct association rules to manage the relationships between change objects and the change workflow

Create change notice templates

Configure the end-user experience with change preferences

Plan changes to the same affected objects concurrently
